

Abstract

A covering for a suction hose includes a sleeve positioned around a suction hose and restraints positioned at the ends of the sleeve for removably coupling the sleeve to the suction hose. The suction hose has a length and the sleeve extends at least along a portion of the length of the suction hose. Handles, pockets, lashes or ties, and reflective materials may be positioned on the sleeve. Indicia may also be positioned on the sleeve. A method of advertising and a method of transporting a suction hose is also provided.
